connecting the future

EU Directives

TRIAX is certified according to RoHS II DS-EN/ISO 9001 and 14001

We conduct audits to make sure that we always work in accordance with our procedures, and we constantly look for ways to improve our efforts.

At TRIAX© we know our obligations and act according to EU directives.

RoHS II:

We do not use products in our production which contain restricted substances, and we demand that our suppliers also fulfil the directive. We are constantly in dialogue with our suppliers to ensure this.

REACH:

In relation to the REACH directive we belong to the group of companies which are called "Downstream Users".

We do not produce chemicals ourselves.
We do not buy chemicals outside the EU.
We do not trade chemicals for business.

This means that we are not obliged to be registered according to the demands in REACH.

To ensure that our suppliers are working according to the directive we have pinpointed selected suppliers with whom we work in order to ensure that they fulfil their obligations.

WEEE 2:

TRIAX is a member of Elretur which is a private organisation established by the "Brancheorganisationen for Elektronik og Hvidevarer" (trade association of electronics and appliances). Elretur helps their members to fulfil their obligations in connection with "Electronic and Electrical Equipment" waste.

We have pinpointed in the current WEEE directive, the products according to the specifications in the WEEE directive and register the annual sales to "Elretur" in accordance with our obligations.
